TITLE: Apparatus for software initiated prefetch and method therefor

Detailed Description Text (19):

Software hint prefetch unit 302 may simultaneously process more than one prefetch request. PCR [0] 442 includes a data value indicating that more than one prefetch request can be in process simultaneously. PCR [0] 442 may be implemented in an embodiment of data processor 100 which may perform multiple memory fetches as the same time. If PCR [0] 442 is reset, prefetch accesses will be serialized. PCR [0] 442 may be a predetermined number, R bits wide. In an embodiment of the present invention, R may be one bit.
